

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

1-12. (Canceled)

13. (Currently Amended) A device for use in a communication system that comprises a housing, the housing for use in a communication system, comprising:

a connection area configured to be at least partially accessible from outside of the housing;

a housing cover comprised of a first hood and a cover portion, the first hood having at least one aperture and at least one attachment mechanism, the cover portion having at least one first guide and at least one clip connection mechanism sized and configured to releasably retain the at least one attachment mechanism of the first hood;

a base housing part; and

a printed circuit board arranged between the base housing part and the cover portion, the printed circuit board having an extension area, the extension area comprised of at least one first plug-in device sized and configured to connect to a first extension printed circuit board;

the at least one first plug-in device comprising a first plug-in device, the first plug-in device being mechanically connected to a first extension printed circuit board, the first extension circuit board at least partially supported on the at least one first guide attached to the cover portion;

the first extension circuit board having at least one second plug-in device that is positioned in the at least one aperture when the first hood is connected to the cover portion, the at least one second plug-in device of the first extension circuit board configured for connection of system terminations; and

the cover portion configured to releasably attach to the base housing part and configured to clamp at least a portion of the printed circuit board against the base housing part when the cover portion is attached to the base housing part; and

wherein the first hood is only releasable from the cover portion after the at least one attachment mechanism and at least one clip connection mechanism are interlocked by use of a mechanical tool to release the first hood from the cover portion. ~~tool.~~

14. (Currently Amended) The ~~device housing~~ according to claim 13, the housing further comprising a second hood adapted to be releasably connected to the cover portion, wherein the second hood covers the connection area when the second hood is connected to the cover portion; and

the at least one attachment mechanism comprised of at least one attachment tab that is insertable into and connected to the at least one clip connection mechanism to form a clip connection, the clip connection being unlockable and releasable by the use of the mechanical tool to unlock the first hood from the cover portion and release the first hood from the cover portion.
~~portion.~~

15. (Currently Amended) The device housing according to claim 13,
wherein the base housing part includes at least one second a guide and a support edge,
wherein the at least one second guide guides the printed circuit board and the cover
portion during assembly by being fit within a portion of the cover portion; ~~assembly;~~ and
wherein the printed circuit board is arranged between the support edge and the cover
portion.

16. (Currently Amended) The device housing according to claim 14,
wherein the base housing part includes at least one second a guide and a support edge,
wherein the at least one second guide guides the printed circuit board and the cover
portion during assembly by being fit within a portion of the cover portion; ~~assembly;~~ and
wherein the printed circuit board is arranged between the support edge and the cover
portion.

17. (Currently Amended) The device housing according to claim 16, wherein the at least one first plug-in device is comprised of a plurality of first plug-in devices and the at least one first extension circuit board is comprised of a plurality of first extension circuit boards, each of the first plug-in devices ~~printed circuit board includes a second plug-in device that is sized and configured to establish an electrical connection with a respective one of the first extension circuit boards. a second extension printed circuit board.~~

18. (Currently Amended) The housing according to claim 13, wherein the ~~printed circuit board includes a second~~ at least one first plug-in device ~~that~~ is sized and configured to establish an electrical connection with the at least one first ~~a second~~ extension printed circuit board.

19. (Currently Amended) The device housing according to claim 13, wherein the at least one aperture is arranged to face the connection area.

20. (Currently Amended) The device housing according to claim 19, wherein each aperture of the at least one aperture is a generally rectangular push through opening.

21. (Currently Amended) The device housing according to claim 14, wherein at least one ~~a~~ part selected from the group consisting of the cover portion, the first hood, and the second hood is manufactured by injection molding.

22. (Currently Amended) The device housing according to claim 21, wherein the mechanical tool is a screwdriver and wherein ~~a part selected from the group consisting of~~ at least one of the cover portion, the first hood, and the second hood is manufactured from a polymer plastic.

23. (Currently Amended) The device housing according to claim 14 wherein a part selected from the group consisting of the cover portion, the first hood, and the second hood is manufactured from a polymer plastic.

24. (Currently Amended) The device housing according to claim 17, wherein the first hood and the second hood are each curved in a convex shape in a central area running concentrically to a center longitudinal axis.

25. (Currently Amended) The device housing according to claim 14 wherein the first hood and the second hood are each curved in a convex shape in a central area running concentrically to a center longitudinal axis.

26. (Currently Amended) The device housing according to claim 14 wherein the first hood and the second hood adjoin side wall sections of the cover portion in an assembled state.

27. (Currently Amended) The device housing according to claim 26, wherein the first hood, the second hood and the side wall sections form a continuous surface when interconnected to the cover portion.

28. (Currently Amended) The device housing according to claim 13, wherein the base housing part has at least one keyhole-shaped cutout for wall mounting.

29. (Cancelled)

30. (Currently Amended) The ~~device housing~~ of claim 14 wherein the second hood has at least one twist lock and at least one snap-in hook, each snap-in hook adjacent a respective twist lock and wherein the second hood is releasable from the cover portion without use of a mechanical tool.

31. (Currently Amended) The ~~device housing~~ of claim 30 wherein the at least one twist lock and at least one snap-in hook are configured to releasably attach to the cover portion when at least a portion of the at least one snap-in hook is inserted into at least one opening formed in the cover portion.

32. (Cancelled)
